

BETWEEN THE STARS

An Immersive Object Theater about Dark Matter

**The Science North Team has unveiled
a new multimedia object theater that
explores the hidden side of our universe.**

The *Between the Stars* Object Theater is a 15 minute wondrous, whimsical special effects show that takes audiences from inside the Earth to the furthest reaches of the cosmos in search of the mysterious dark matter that makes up 85 percent of the mass in the universe.

The audience is introduced to an otherworldly being called String-man, who ultimately leads them to the very origin of the universe where the true beauty of dark matter is revealed, only to return to earth to descend underground where scientists are searching for whispers of this fundamental particle.

Using the innovative Musion® Eyeliner Technology that makes animated images appear to float magically in mid air, the show enchants audiences of all ages.

Additional effects include award-winning animation, custom special effects lighting, and custom music composition. Audiences are kept on their toes when witnessing hidden objects that seem to appear out of nowhere!

Object theaters are unique experiences that allow a wide array of complex content to be presented to visitors in an immersive, fun, educational, engaging and entertaining way.

Science North's in-house team of scientific and multimedia experts have conceptualized and produced these award-winning experiences for the past 25 years.

Science North is an agency of the Government of Ontario.

SIZE

Footprint: an 800 sq./ft. to 3,000 sq/ft., enclosed room
Seating: 15-50 guests

COST

From \$500,000 to \$800,000 depending on the length of the show, and existing infrastructure.
